(Ctrl+End) QUESTION 1You are configuring SharePoint 2013 to support business intelligence. You need to install PowerPivot for SharePoint. What should you do? A. Download and install PowerPivot for SharePoint from the PowerPivot SQL Server 2008 R2 SP1 Feature Pack webpage.B. Run the SQL Server 2008 setup package.C. Download and install PowerPivot for SharePoint from the PowerPivot SQL Server 2012 Feature Pack webpage.D. Download and install PowerPivot for SharePoint from the PowerPivot SQL Server 2012 SP1 Feature Pack webpage. Answer: D QUESTION 2You are configuring a SharePoint farm. You have the following requirements:- Implement an enterprise resource pool.- Enable tasks to be assigned to users.- Implement a resource breakdown structure.You need to implement a solution that meets the requirements. What should you do? A. Create a SharePoint team site.B. Provision a Microsoft Project web app.C. Create a SharePoint task list.D. Import a Microsoft Excel spreadsheet as a custom list. Answer: B QUESTION 3You are implementing a claims-based authentication solution for a SharePoint farm in an Active Directory Domain Services domain. You install and configure Active Directory Federation Services (AD FS). You need to ensure that all web applications in the farm support SAML-based claims authentication. What should you do? (Each correct answer presents part of the solution. Choose all that apply.) A. Configure AD FS with the web application as a relying party.B. Configure web applications to use forms-based authentication and AD FS as the trusted identity provider.C. Configure web applications to use claims-based authentication and AD FS as the trusted identity providerD. Configure web applications to use classic mode authentication and AD FS as the trusted identity provider.E. Configure SharePoint to trust AD FS as an identity provider. Answer: ACE QUESTION 4You are moving a customized SharePoint site collection to a new farm. You attach and mount the source content database in the destination farm. You need to ensure that all customizations from the source farm are available in the destination farm. What should you do? A. Install all custom applications in the destination farm.B. Copy all custom master pages from the source site collection to the Style Library in the destination site collection.C. Copy all SharePoint groups and users from the source farm to the destination farm.D. Copy all custom master pages from the source site collection to the master page gallery in the destination site collection. Answer: A QUESTION 5An organization upgrades a SharePoint 2010 environment to SharePoint 2013. A site collection is running in SharePoint 2010 compatibility mode. You must verify that the following features will function correctly when the site collection is upgraded to SharePoint 2013 native mode:- List views- Custom web parts- Content query web parts- SubsitesYou need to ensure that you can perform verification testing without impacting the current user experience. What should you do? A. Upgrade the site collection to SharePoint 2013.B. Perform a database attach upgrade.C. Enable the Visual Upgrade option for the site collection.D. Generate an upgrade evaluation site collection. Answer: D QUESTION 6Drag and Drop QuestionA company plans to upgrade from a SharePoint Server 2010 farm to a SharePoint Server 2013 farm. You plan to install components that are required on the new farm before upgrading. You need to identify the customizations that must be installed on the new farm. Which command should you run? (To answer, drag the appropriate command and switch to the correct locations in the answer area.)

	Answer Area
-o enumallwebs	
-o enumdeployments	
-o enumcontentdbs	
psconfig.exe	-includewebparts
Get-SPContentDatabase	-includefeatures
stsadm.exe

QUESTION 8 A SharePoint 2010 environment contains a Microsoft SQL Server 2008 R2 database instance named SP-SQL that hosts the databases for the farm. You are upgrading the farm to SharePoint 2013. You need to ensure that users can access the unmodified farm contents during the upgrade process. What should you do? A. In SQL Server Management Studio, locate the SQL Server instance containing the content databases and service application databases you plan to upgrade. Set the Instance Read-Only value to True. B. Run the following Transact-SQL (T-SQL) statement for each content database and service application you plan to upgrade. ALTER DATABASE <database name> SET READ_ONLY; C. Run the following command-line tool for each site collection in the content databases you plan to upgrade. Stsadm -o setsitelock -urKsite collection name> -lock readonly D. Sign in to Central Administration in the SharePoint 2010 environment you plan to upgrade. Set each content database and service application database to Read-Only. Answer: B QUESTION 9 Drag and Drop Question You are preparing to upgrade from a SharePoint 2010 environment to a SharePoint 2013 environment. The SharePoint 2010 environment includes a large number of content databases. You restore backups of the content databases to the Microsoft SQL Server instance in the SharePoint 2013 environment. You need to upgrade all content databases and minimize monitoring requirements. What should you do? (To answer, drag the appropriate terms to the correct location or locations in the answer area. Each term may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

starts

Answer:

QUESTION 17 Drag and Drop Question An organization is involved in a legal case related to one of its products. All documents related to this product are stored in a subsite of a site collection. The site collection has an existing policy to delete documents that have not been modified for four years. You must protect the data that is relevant to the case without impacting other content, changing file locations, or duplicating files. You need to configure SharePoint to ensure that relevant documents are NOT deleted by existing or future expiration policies. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

QUESTION 18 Drag and Drop Question An organization uses SharePoint Server collaboration sites for all projects. Each project has a unique site. Project team members have Contribute permission levels to each project site of which they are members. Sites for completed projects must meet the following requirements:- The project team members must be able to access files.- They must be prohibited from editing or deleting files.- They must not be able to change site permissions. You need to configure the SharePoint environment to meet the requirements. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Answer Area
Manage record declaration settings on the site collection.
Enable in-place records management for the site collection.
Manage record declaration settings on the various site collection library apps and site templates.
Assign the Manage Hierarchy permission level to the project team members.
Assign the Limited Access permission level to the project team members and turn on lockdown mode for the site collection.
